

Common Components Messages Activities

TCCG meeting
Frankfurt am Main, 5 December 2019

0. Background and goal of the presentation
1. Usage Guidelines: changes between UDFS v2.0 and UDFS v2.1

0. Background and goal of the presentation

The purpose of Common Components (CoCo) is to offer a common set of functionalities to all services through the A2A and U2A mode. A2A ISO 20022 specifications are published in MyStandards (from a technical view) and described in the CoCo UDFS (for a business view).

The aim of this presentation is to give a comprehensive overview of the activities performed on the common component messages, describing all changes made in MyStandards Usage Guidelines for UDFS v2.1, starting from the UDFS v2.0 version.

1. Usage Guidelines: changes between UDFS v2.0 and UDFS v2.1

Transversal activities

The following activities have been applied to all collections:

- BRs have been aligned with the UDFS;
- Annotations have been amended (where needed) to improve the customer understanding;
- Message examples have been amended to be compliant with the UGs and with the usage cases reported in the UDFS;
- Message examples have been uploaded in the “Sample Message” MyStandards view, to give an immediate and most comprehensive view to the customer (except for head.001 and head.002, where the incorrect managing of the signature by MyStandards make the validation failed – in this case the examples have been uploaded as attached documents);
- Collection names have been amended to remove GENERIC or Service labels (RTGS/CLM).

Starting from UDFS 2.1, Common Component Usage Guidelines are stored in MyStandards in the CoCo sub-group. To allow the comparison with the UDFS 2.0 version, also the UDFS 2.0 Usage Guidelines have been uploaded in CoCo.

Messages are grouped into the following collections:

Limit - camt.009, camt.010 camt.011, camt.012
